

INDUSTRIAL
KEYBOARD WITH
INTEGRAL
MOUSE

KBIM2

The KBIM2 provides a full QWERTY keyboard with an integral joystick. It is designed for harsh environments and is fully sealed.

The joystick uses a patented opto strain gauge technology providing both an ergonomic and very durable pointing device. The joystick also incorporates a 'click in the stick', further enhancing its ergonomics. The joystick can be held between the fingers or used as a finger/thumb pad.

The keys are hard wearing membrane type with tactile feedback.

The unit is available for stand alone or 19" panel/rack mount.

The joystick emulates a Microsoft® Mouse. It connects to a serial or PS/2 port.

The KBIM2 is ideally suited to operator interface requirements in the mining, marine, defence, petrochemical, and food manufacturing industries as well as process plants, flour mills, cement works and smelters.

FEATURES
